## **Growing the jobs of the future**

# **Antibody Research working with bioscience interns**

ST. CHARLES COUNTY, MO (March 23, 2011) --- With all of the changes in the economy, EDC business incubator tenant Antibody Research Corporation is doing its part to help a bioscience intern from East Central College receive real-world experience as he trains for a new career.

The intern, Greg Overton, was a carpenter for 12 years. As work got harder to find, he decided to go back to school. "I took a biology class and it was fascinating," he said, "so I decided to switch my focus to this upcoming field."

His work with Antibody Research Corporation is part of a course he is required to take prior to graduating this spring with an associate's degree in applied science. "Already I'm fascinated by what they do here. I'm learning a lot and I want to continue my education in this field," Overton said.

Das Prayaga, Antibody's owner and chief scientist, is also planning to work with an undergraduate intern from Washington University this summer.

For more information about Antibody Research Corporation based in the small business incubator operated by the Economic Development Center of St. Charles County, contact Das Prayaga at 636.734.0192 or visit the company online at [www.antibodyresearch.com](http://www.antibodyresearch.com)
